

CDQ First Time Right

Every business relationship should start with trustworthy data.

Validated business partner information available at one-click creation and enrichment in your SAP workflows.

Manual record creation is a thing of the past. With CDQ external sources integrated directly into your search field in SAP master data governance workflows, you can enjoy a websurf-like experience for searching, verifying and enriching your business partner master data, while increasing data quality!

Legal names, addresses for billing, shipping, legal entity, country, tax ID numbers, latitude/longitude of warehouse or production facilities - all the necessary data (converted into Latin script) at your fingertip and easy to consume by SAP Master Data Governance processes.

- **simplify your customer and vendor master data onboarding**
- **update and augment existing business partner records easily**
- **avoid entry errors and reduce your data maintenance efforts**

READY FOR: SAP Business Suite; S/4HANA on-premise; SAP MDG, cloud edition; SAP MDG on S/4HANA

BENEFITS

Improved productivity and data quality

- Complete, correct, fit-for-use data from 70+ external data sources provided by CDQ
- One-click transfer instead of manual search, validation, document mining, and error-prone data entry
- Golden Record augmenting results from the international registers (including premium data sources like BvD and D&B)

Automated data creation with CDQ First Time Right

- Look Up and Create button to search for matching reference data in CDQ's data sources
- Powered by 2,300+ ready-to-use data quality rules
- Direct import from various trusted, open, and commercial sources into SAP
- API-first approach enabling further configurations

Plug & play for SAP Master Data Governance

- Lean process in your SAP landscape with the same look & feel available out of the box
- Integration of SAP MDG and CDQ services based on a pre-configured mapping to SAP One Domain Model Business Partner
- Easy technical setup and direct accessibility for the users
